

Take Control Of Your Audio System With SoundTube Dante-Enabled Products.

A Supervised System Thanks To The Magic Of The Network.

AV over IP is the future of distributed audio with reliability, ease of installation and budget-friendly solutions available. SoundTube's IPD/STNET-Hub2 amplifiers create an IP-based audio distribution alternative to traditional 70v or 100v audio systems at a comparable price point. The IPD-Hub 2 amplifier features two-channel DSP amplification with a multitude of power options, including PoE, PoE+, 40W PoE and 24v PS.

Ideal for small to medium-sized applications, including bars, restaurants, hospitality, education facilities and more, SoundTube STNET components offer a complete networked audio system with local and Dante inputs for simplified network control while addressing the network requirements for commercial audio connectivity.
